There is a separate unit that deals with developing projects in economics. Here, the students are expected to develop projects, which have primary data, secondary data or both. The students are also instructed about how to conduct case study and its relevance in the real life.	A project can be given to the student on any topic where they can conduct a survey in the school, (e.g. how many teachers cast their vote, collect the data and can present the data in the form of table and graph).
