Central problems of an economy: what, how and for whom to produce; concepts of production possibility frontier and opportunity cost.	After going through this unit, the learners will be able to: explain some basic tools-equation, slope, graph, etc. used to represent concepts and theories in mathematical and geometric forms. understand that study of economics is broadly categorized into microeconomics and macroeconomics and understand the difference between the two. infer that fundamental cause of all economics problems is scarcity of resources, wants being unlimited a natural fact. infer that every country- big or small, rich or poor-faces certain economic problems of what, how and for whom to produce. Explain the common problems through the mathematical tools.	Worksheets on concepts and numericals.

	2.	Collection, Organisation and Presentation of Data: Collection of data – sources of data - primary and secondary; how basic data is collected; methods of collecting data; some important sources of secondary data: Census of India and National Sample Survey Organisation. Organisation of Data: Meaning and types of variables; Frequency Distribution. Presentation of Data: Tabular Presentation and Diagrammatic Presentation of Data: (i) Geometric forms (bar diagrams and pie diagrams), (ii) Frequency diagrams	In this part, the learners will learn to develop the skill of data collection, organisation and presentation. It also aims to equip the learners with some basic statistical tools so that they can easily analyse, and comprehend any economic information and illustrate appropriate conclusions. The units deals with chapters on the meaning of economics as well as the meaning and scope of statistics in economics, data collection, organization and presentation and statistical tools and interpretation. There is a separate unit that deals with developing projects in economics. Here, the students are expected to develop projects, which have primary data, secondary data or both. The students are also instructed about how to conduct case study and its relevance in the real life.	A project can be given to the student on any topic where they can conduct a survey in the school, (e.g. how many teachers cast their vote, collect the data and can present the data in the form of table and graph). Worksheets on concepts and numericals.
